Comparison and Analysis of Special Pupil Attainment

Updating to CASPA 2024 for users of a CASPA 2022 School Module

This document summarises the options and relevant procedures for updating to CASPA 2024 for existing users of CASPA 2022.

Introduction:

You will only use this document if you are still using CASPA 2022. CASPA 2022 provided analysis for pupils who were on roll in the 2021/2022 academic year. An update path is still supported from CASPA 2022 to CASPA 2024 and as a result, you can either update to CASPA 2023, populate with pupil data, and then update to CASPA 2024, or jump straight to CASPA 2024. This document will discuss the options to enable you to make the best decision for you, and then guide you through the procedure that supports the option you choose.

1. Your decision

At this point, you have three options:

1. Update one year at a time through CASPA 2023 to give you the best set of historic data for each year's on roll cohort
2. Update CASPA directly to CASPA 2024
3. Ignore CASPA 2022 and start afresh with a new CASPA 2024 installation

The following may assist with deciding which option is correct for you:

- First check that you have any data at all in CASPA. In the unlikely event that your CASPA 2022 installation had never been used, select option 3.
- The feature 'Set effective year' in CASPA allows you to turn the clock back to a particular year that you were using CASPA (eg CASPA 2021) and carry out analysis for pupils on roll in that year. In order for this feature to be enabled for a particular year, your CASPA installation must have been populated with pupil records (ie, which pupils were on roll in the summer term of that year) and assessment data. In order to use the set effective year feature for summer 2023, you must select option 1.
- If you update directly to CASPA 2024, CASPA will have no knowledge about which pupils were on roll in summer 2023. If you are unable to create an export from your school MIS that identifies exactly those pupils who were on roll in the summer term 2023, but you have data in CASPA 2022 that you wish to retain, option 2 is most likely to be the right option. You can still 'set effective year' to CASPA 2022 (or as far back as CASPA 2008 if you used that version) and the historic data for pupils who are still on roll in the current year will remain available.

2. Implementing your chosen option

Option 1. Update CASPA one year at a time, importing data after each update

In summary, this option will require that you first update to CASPA 2023 and then import pupil data and results, then update to CASPA 2024.

Step 1: Check that your data in CASPA 2022 was updated

First check that summer 2022 assessment results were recorded in CASPA 2022. Updating to CASPA 2023 will cause assessment results for Summer 2022 and targets for Summer 2023 recorded

in CASPA 2022 to be 'carried forward' to CASPA 2023 as the start value for the 2022/2023 academic year for pupils who were on roll in 2021/2022. As a result, it is valuable to ensure that the results and targets carried forward are up-to-date and representing those that were relevant in the summer term 2022.

Go to **Data | CASPA assessment data**. The left hand column (of the 3 columns normally displayed for both Core and Foundation subjects) will display the summer 2022 results if CASPA 2022 is up to date. If not, you are advised to update these at this stage since updating will result in CASPA carrying forward results and targets – so these should be the correct results and targets to avoid you needing to correct them later.

Results and targets can be entered manually into CASPA 2022 or imported from a wide range of electronic sources; for further information, refer to the appropriate guidance note available via the menu option **Help | Guidance notes**.

Step 2: Updating from CASPA 2022 to CASPA 2023

Before updating to CASPA 2023, please ensure any CASPA guidance notes you may have opened are closed, in order that they can be updated. Please also note that you must have adequate network privileges in order to update CASPA.

To carry out the update from CASPA 2022 to CASPA 2023, go to the following web page and follow the instructions provided. Once complete, return to this document again and proceed to the next step.

<http://www.sgasystems.co.uk/caspa/updates/manual/CaspaUpdate2300.htm>

Step 3: Creating pupil records in CASPA 2023

On completion of the update to CASPA 2023, your CASPA installation will have been updated to CASPA 2023, but will not contain any information regarding which pupils were on roll at Summer 2023. If you were to update this 'empty' CASPA 2023 system to CASPA 2024 immediately, you will not be able to 'turn back the clock' to view data for the cohort of pupils on roll at Summer 2023.

In order to be able to record results, targets or evidence for pupils who were leavers during the 2022/2023 academic year, and to be able to 'turn the clock back' in CASPA 2024 to view data for your 2022/2023 cohort as if you were running CASPA 2023, pupil records for those pupils on roll at Summer 2023 must be created in CASPA 2023 before updating to CASPA 2024.

In order to create pupil records in CASPA 2023 for the cohort of pupils on roll in Summer 2023, please refer initially to the guidance that will be displayed immediately after the 'Welcome to CASPA' dialog that you will see when you first log in to CASPA 2023, which needs to be read in conjunction with the additional information below specific to the means by which you maintain pupil records in CASPA.

Additional guidance for SIMS Users:

Please follow the standard guidance for information on how to import the CASPA Pupil Data 2023 Report Definition file into SIMS .net. Once this has been done, please proceed as follows: Firstly, log in to SIMS. If SIMS was already open, please shut down and restart SIMS .net. Via the menu options in SIMS .net, select the following:

- **Reports | Design report**, and click the 'Open' button
- In the 'Open report' dialog, select **Focus | Student** and in the list of reports, select 'CASPA Pupil Data 2023' and click 'OK'
- Under 'Refine Data Area', in the dropdown menu below the heading 'My report is based on Student', select 'On Roll'
- Under 'Report Summary', double click on 'Effective on'
- Under 'Specify Effective date', tick 'Use Effective Date' and select a date during Summer 2023 to provide details for all pupils who were on roll during that term; please ensure that the

- date you select is before the leaving date used for leavers at the end of Summer 2023.
- Click 'Finish', select 'Run my report' and click 'OK' to run the report
- When SIMS reports 'Caspa Pupil Data 2023.xml has been created', you have successfully exported pupil data from SIMS .net

Now log in to CASPA 2023, from the **File** menu, select **Refresh pupil data from SIMS .net export file** and follow on-screen instructions. Please check the data that CASPA displays during the import very carefully (including year groups) to ensure the correct data for the 2022/2023 academic year is being imported. During the import process, CASPA will detect that pupils continuing on roll from the 2021/2022 academic year have changed year groups, etc., and will ask you to confirm that this is because the pupil data being imported is for a new academic year, i.e. that you have 'rolled forward' in your MIS. You must confirm that this is the case.

Additional guidance for users of an MIS other than SIMS .net:

Please create a full Common Transfer File (CTF) from your school MIS, based on a date during the Summer term 2023 to provide details for all pupils who were on roll during that term; please ensure that the date you select is before the leaving date used for leavers at the end of Summer 2023.

Now log in to CASPA 2023, from the **File** menu, select **Refresh pupil records from Common Transfer File** and follow on-screen instructions. Please check the data that CASPA displays during the import very carefully (including year groups) to ensure the correct data for the 2022/2023 academic year is being imported. During the import process, CASPA will detect that pupils continuing on roll from the 2021/2022 academic year have changed year groups, etc., and will ask you to confirm that this is because the pupil data being imported is for a new academic year, i.e. that you have 'rolled forward' in your MIS. You must confirm that this is the case.

Additional guidance for users with no MIS:

- **If you update pupil details manually:**

Rolling forward is achieved by selecting the menu option **Data | Advanced tasks | Roll data forward to new academic year**. Running this option will first display the 'Identify leavers' dialog which will allow you to identify pupils who left your school at the end of the Summer term 2022. Once you have identified all leavers, a NC year value for the new academic year will be automatically set for all pupils remaining on roll, presuming that each pupil will be promoted by one NC year. If necessary, you can modify these values using the Basic pupil data entry screen.

You can now add records for pupils who arrived in your school during the 2022/2023 academic year.

- **If you update pupil details by importing from a CSV:**

Please create a CSV file that represents **only** the cohort who were on roll in Summer 2023, in accordance with the specification available via the menu option **Help | Reference** in CASPA 2023.

Now log in to CASPA 2023 and, from the **File** menu, select **Refresh pupil records from Comma Separated Variable File** and follow on-screen instructions. Please check the data that CASPA displays during the import very carefully (including year groups) to ensure the correct data for the 2022/2023 academic year is being imported. During the import process, CASPA will detect that pupils continuing on roll from the 2021/2022 academic year have changed year groups, etc., and will ask you to confirm that this is because the pupil data being imported is for a new academic year, i.e. that you have 'rolled forward' in your MIS. You must confirm that this is the case.

Step 4: Recording assessment data for Summer 2023 in CASPA 2023

If pupil records for Summer 2023 have been created in CASPA 2023 then, as part of this process, the assessment results for Summer 2022 and targets for Summer 2023 recorded in CASPA 2022 will have been 'carried forward' to CASPA 2023 as the start value for the 2022/2023 academic year for pupils remaining on roll in 2022/2023.

Just as you did in Step 1, results and targets should now be entered manually into CASPA 2023 or imported from a wide range of electronic sources; for further information, refer to the appropriate guidance note available via the menu option **Help | Guidance notes**.

Step 5: Updating from CASPA 2023 to CASPA 2024

Before updating to CASPA 2024, please ensure any CASPA guidance notes you may have open are closed, in order that they can be updated.

To carry out the update from CASPA 2023 to CASPA 2024, select **System | Check for updates**, and follow on-screen guidance.

Step 6: Creating pupil records in CASPA 2024

When you reach the Welcome screen in CASPA 2024, please stop and read the message, and follow the instructions given to refresh your basic pupil data. Since your CASPA installation is now up to date, follow the instructions in the guidance note exactly to create an export from your MIS for current-year pupils. This process will also identify your leavers at Summer 2023 and the new intake for Autumn 2023.

Step 7: Recording assessment data for autumn 2023 in CASPA 2024

If pupil records for Summer 2023 have been created in CASPA 2023 then, as part of this process, the assessment results for Summer 2023 and targets for Summer 2024 recorded in CASPA 2023 will have been 'carried forward' to CASPA 2024 as the start value for the 2023/2024 academic year for pupils remaining on roll in 2023/2024.

Just as you did in Step 1, results (including baseline assessments in the autumn term) and targets can be entered manually into CASPA 2024 or imported from a wide range of electronic sources; for further information, refer to the appropriate guidance note available via the menu option **Help | Guidance notes**.

Option 2. Update CASPA directly to CASPA 2024

As noted previously, if you carry out this option, you will not have the option to carry out analysis for pupils who left in summer 2023 as CASPA will know only about pupils who were on roll each year you used CASPA up to summer 2022 and then in the current academic year. The update cannot be 'undone' once carried out so please be sure that this is your preferred option prior to carrying out the following steps.

Step 1: Update from CASPA 2022 to CASPA 2024

Before updating to CASPA 2024, please ensure any CASPA guidance notes you may have open are closed, in order that they can be updated.

To carry out the update from CASPA 2022 to CASPA 2024, select **System | Check for updates**, and follow on-screen guidance.

Step 2: Creating pupil records in CASPA 2024

When you reach the Welcome screen in CASPA 2024, please stop and read the message, and follow the instructions given to refresh your basic pupil data.

Following the successful refresh of basic pupil data, CASPA 2024 will be fully enabled.

Step 3: Recording assessment data for autumn 2023 in CASPA 2024

Results (including baseline assessments in the autumn term) and targets can be entered manually into CASPA 2024 or imported from a wide range of electronic sources; for further information, refer to the appropriate guidance note available via the menu option **Help | Guidance notes**.

Option 3. Start afresh with a new installation of CASPA 2024

This option will result in an entirely new CASPA 2024 installation with no data brought forward from your previous CASPA 2022 installation and with no simple way to migrate data from the old to the new installation. Continue with this option only if this is understood as you will start with an empty CASPA 2024 installation and will then go on to populate it with pupil and assessment data for your current on-roll cohort.

Step 1: Install CASPA 2024

Please go to the following web page and follow the supplied for guidance for installing CASPA 2024.

<http://www.sgasystems.co.uk/caspa/setups/caspainstaller.htm>

Step 2: Creating pupil records in CASPA 2024

When you reach the Welcome screen in CASPA 2024, please stop and read the message, and follow the instructions given to refresh your basic pupil data.

Following the successful refresh of basic pupil data, CASPA 2024 will be fully enabled.

Step 3: Recording assessment data for autumn 2023 in CASPA 2024

Results (including baseline assessments in the autumn term) and targets can be entered manually into CASPA 2024 or imported from a wide range of electronic sources; for further information, refer to the appropriate guidance note available via the menu option **Help | Guidance notes**.

3. Next Steps:

You are now ready to record assessment results, targets, evidence and notes using CASPA 2024.

You can immediately record results and targets for the new academic year. For example, any baseline assessments can be entered, and you can use CASPA to not only record the output of target setting activities, but also to inform and support you during your target setting (see guidance note **Help | Guidance notes | Using CASPA to inform target setting**).

It is worth noting that, having effectively 'jumped' to CASPA 2024, there are many enhancements to CASPA that you will not yet have experienced. For further information on these, please refer to CASPA's Help system (**Help | Contents**) for the 'What's new' pages.
